---

Please try visiting your control panel login screen (ex: [www.your-domain.com:8443](http://www.your-domain.com:8443)) and click on the link for 'forgot your password' - it can be emailed to you.

Once you're able to login to the Plesk control panel you can change your FTP password there if you wish. ( > Home > Domain Administrator )

Otherwise, please open a support ticket with us here: <http://my.dotcomhost.com/support/> - request to have your password reset and please include the last 4 digits of the credit card number we have on file for you to verify your identity.
