---

June 6, 2009:

If you log in to your Miva Merchant store admin and see a message that your license key has been de-activated, Miva's licensing manager seems to be down at the moment and license validation is failing. Â We are aware of the problem and are in contact with Miva. Â They are working on the problem and expect to have this resolved shortly. Â Your storefront will continue working unaffected - it's only the admin interface that makes a connection to Miva's licensing server and fails.
